ENVIRONMENTAL PROTECTION: BIOSPHERA

Biosphera is a marking system based on Listone Giordano’s green procurement policy which meets the need to provide consumers with synthetic, clear and transparent information on the origin of the raw materials used. It focuses solely on the issue of forestry resources protection, in particular on their use in multilayer wooden floors. As such it is not meant to replace the internationally established certification protocols, which generally have broader fields of

application and wider scope. Listone Giordano through Biosphera aims to spread among its customers a culture of environmental responsibility and promote the purchase of certified wood.

BIOSPHERA CERTIFIED

The mark identifies products made with raw materials with certified forestry management according to internationally recognised standards (FSC, PEFC, SFI, OLB, LEI, etc.)

BIOSPHERA CONTROLLED

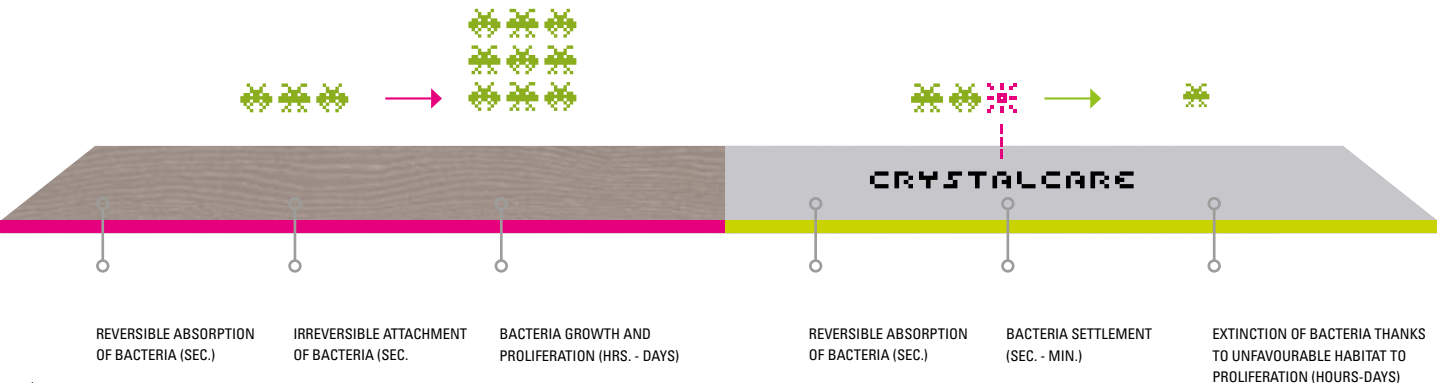

The mark identifies products made with raw materials whose legal origin and forestry management, although not yet certified, is however validated by specific audits and documentary evidence. This is usually the intermediate step towards the official forestry certification.

HEALTH PROTECTION: CRYSTALCARE

How would you enjoy walking barefoot on your wood floor?
Thanks to Crystalcare, the antibacterial finish developed by Listone Giordano and ICRO, it is now totally safe. A simple additive incorporated into Xplus2, Naturplus2, Mattplus, Invisible Touch and Oleonature finishes ensures the antibacterial certification issued by CATAS S.p.A. laboratories according to ISO

standard 22196:2007. Your well-being, your children’s health and the safety of the places where they live and play in are the main focus of Crystalcare’s extraordinary innovation.
Also developed for wood floors installed in healthcare and medical applications.

CERTIFICATIONS

"Ask for FSC certified products ®"

FSC®

Certification of the chain of custody ensures the raw material originate from forests managed according to strict environmental, social and economic standards.

PEFC

The certification of the chain of custody stating the provenance of the products sourced from sustainable forests.

ISO 9001

Certification of the Company's quality management system.

ISO 14001

Certification of the environmental management system.

F-4 STARS

Listone Giordano wood floors comply to the most restrictive class F**** classification system on formaldehyde emissions defined by the Japanese Ministry of Land, Infrastructure, Transport and Tourism (MLIT).

Formaldehyde

Listone Giordano fully complies to the class E1 limits, which is amongst the strictest European regulations currently in force (UNI EN 14342).

US TSCA

Certification CARB2 / TSCA Title VI

The plywood panels used for Listone Giordano wood floors are in compliance with US TSCA Title VI and CARB phase 2 Formaldehyde emissions.

TÜV Proficert-Product Interior

It certifies that Listone Giordano 2-layer wood floors guarantee compliance with health and quality criteria selected by TÜV Hessen. A voluntary certification specifically developed for construction products intended for indoor application.

French Certification

Emissions of Volatile Organic Compounds

All Listone Giordano products tested according to n°2011-321 French Decree have attained A+ rating, the highest among those in the Decree.

Toy certification

Listone Giordano finishes are approved according to standard EN71-3 which assures fitness for use in children's toys.

Fire-proof reaction

The updated products list related to classes of fire-reaction is available on www.listonegiordano.com

CE certification

Listone Giordano strictly complies to all CE rules related to wood floors.

GENERAL INFORMATION.

WOOD, A LIVING MATERIAL

Wood is a “living” material interacting with the environment and affected by external factors such as sunlight, temperature, air moisture and daily use.

DARK ↔ LIGHT

COLOUR

The colour of wood largely depends on certain substances it contains, known as extractives. The colour of these substances is modified by exposure to air and light, so that the original colour of every parquet floor undergoes more or less marked transformations over time.

Due to the high extractives content in tropical wood species, they are especially prone to chromatic changes usually evolving into darker brown hues.

Iroko and Doussie are two of the species that undergo the strongest colour changes.

Doussie, in particular, may in some cases undergo localised phenomena of strong and quick colour changes. Boards with originally similar colours may react differently and over time may turn into very different hues.

Under specific conditions these colour alterations may make the traces of mineral substances, a natural part of the wood structure, more evident.

Teak may initially show very conspicuous colour variations. These variations tend to diminish and disappear over time and the colour turns a consistent medium-light hue.

Oak features a fair colour stability. With exposure to light it evolves into warmer hues, with the yellow component becoming more predominant. This phenomenon occurs even in pigment finished products (i.e. “Michelangelo” and “Grisaglie” range).

Monteriggioni and Montesiepi initially show marked colour variations (contrasts). Over time, their appearance will tend to homogenize towards a more neutral and lighter gray tone. This evolution happens even without light and air exposure and it's due to the natural colour change of the surface treatment.

Long exposure of some wood species to intense and direct sunlight, for instance near a French window, may cause discolouration (UV rays produce these effects on many materials other than wood). In order to limit this phenomenon, we recommend the use of curtains or special UV filtering films to be applied to the glazing.

SILVER GRAIN

Oak boards sourced from a perfectly radial section of the log feature straight grain as well as ray flecks, typical lustrous figures even called silver grain.

Silver grain has always been sought after as an indicator of quality and value.

In addition to the aesthetic factor due to more even grain, it also indicates better technical performance (dimensional stability, impermeability, etc.).

SAMPLES

Wood is a natural material, uneven and variegated by its very nature: every item is unique and unrepeatable. Therefore samples consisting of few boards can only provide a general idea of what a parquet will look like and cannot fully show the different hues, grains and unique features.

As mentioned above, wood colour tends to change over time, due to exposure to light and air. That is why a recently installed wood floor typically features a different appearance and hue compared to a sample panel of the same product which has been exposed to natural light for some time.

WEATHER CONDITIONS

Wood naturally undergoes swelling or shrinking, depending upon the moisture and temperature conditions it is exposed to. For a floor to always be in perfect conditions, **the air temperature must be kept between 15°C and 30°C and relative air humidity between 45% and 65%.**

This range also coincides with the optimal conditions for people's well-being.

These climatic conditions should be maintained during installation as well as afterwards, including when the premises are not in use.

In certain situations, especially during the winter months, it may be necessary to use air humidifying systems in order to assure compliance with the indicated conditions.

In case of underfloor heating, in addition to the requirements for temperature and air humidity, the floor surface temperature limit with system in operation of 27°C should never be exceeded.

To prevent exceeding this limit, we recommend not to cover the floor with thick rugs or other materials having high thermal resistance in the case of underfloor heating.

Listone Giordano products featuring birch plywood support (identified in the “Technical specifications” section) may also be used in particularly severe conditions of temperature and humidity, i.e. with relative air humidity down to 30%, and with floor surface temperature up to 29°C. Under these conditions the product retains its integrity and functionality, however it may be subject to phenomena typically connected to wood shrinking, such as warped board section (cupping), the formation of cracks between boards, or even the formation of fissures within the individual board.

FISSURES

The appearance overtime of a few tiny fissures on the top hardwood layer is a natural phenomenon and inevitable in statistic terms even if the recommended climatic conditions are complied with.

HARDNESS

The individual hardness features of all wood species processed to manufacture the parquet products herein make them suitable for hardwood flooring. However surface dents or marks may occur in even the hardest of woods, if the hardwood floor undergoes impacts, is hit by falling objects, or is loaded with highly concentrated weight (stilelto heels, ladders, etc.).

HANDCRAFT PROCESSING

Atelier wood flooring collections feature uneven shape and appearance typical of a hand-made product. Visible differences between planks or within the same plank (i.e. uneven and/or rough surface, difference in hues) are not defects but rather represent the very essence of the products. Some processes cause roughness and minor splintering on the surface, which the cloths used for cleaning may get caught in. The presence of said roughness and tiny splintering must be carefully assessed if the flooring is for barefoot use.

VARNISHES

The wear due to treading tends to alter the gloss of the finish over time, especially in high-traffic areas. Correct maintenance can keep this unavoidable phenomenon under control. A gloss alteration may be caused also by energetic and repeated rubbing, due for example to the attempt of removing a stain.

NATURAL OIL FINISHES

Products with natural oil finishes tend to yellow slightly, should these products be kept in their boxes for a long time or not be exposed to light and air.

This is an utterly natural and transitory phenomenon. All it takes for the product to regain its original appearance is to expose the boards to air and direct sunlight. In the event of exposure to indirect lighting, typical of indoors premises, the process may require a few weeks.

Natural oil-based finishes have the characteristic of continuing to permeate the wood fibres even after application, while the material is still in its packaging. Upon installation, the surface of the product may therefore appear especially "dry" in some areas. In that case all it takes is to apply the appropriate maintenance product immediately after installation.

USE AND MAINTENANCE INSTRUCTIONS

Instructions for correct use and maintenance of the wood flooring are available in the specific section of www.listonegiordano.com containing the technical sheets. We recommend checking it when selecting the product.

TECHNICAL SPECIFICATIONS

FINISHES

XPLUS2

CRYSTALCARE

High-resistance solvent-free varnish coating with a refined satin appearance. This finish features the anti-bacterial Crystalcare technology.

NATURPLUS2

CRYSTALCARE

Solvent-free varnish coating, which emphasizes the wood's grain and authenticity. This finish features the anti-bacterial Crystalcare technology.

NATURPLUS2 MATT

CRYSTALCARE

Solvent-free varnish coating, which emphasizes the wood's grain and authenticity and highlights the natural matt feature. The finish features the anti-bacterial Crystalcare technology.

MATTPLUS

CRYSTALCARE

Solvent-free varnish coating similar to an untreated surface in appearance and colour. This finish features the anti-bacterial Crystalcare technology.

INVISIBLE TOUCH

CRYSTALCARE

Water-based, air-dried finish. It protects wood whilst preserving the natural appearance and touch of an untreated surface. This finish features the anti-bacterial Crystalcare technology.

OLEONATURE

CRYSTALCARE

Natural oil-based, air-dried finish. Thanks to a special protective treatment applied as last coat, it features high protection and convenient maintenance. This finish features the anti-bacterial Crystalcare technology.

GRADES

Elite

Mixed grain, essentially even colour in connection with the typical features of the species. Possible small knots in some boards.

Fibramix

Mixed grain. The boards may feature colour variations and knots. In the extra wide boards (width from 140 mm and over), knots may even be filled or partially filled.

Unica

Mixed grain and colour variations. Presence of knots, including filled or partially filled ones. Some boards may contain sapwood according to the different wood species.

Country

Mixed grain and colour variations. In Oak, widespread presence of knots, including filled or partially filled ones. In tropical species, in addition to marked colour contrasts, mineral formations typical of the structure of this type of wood may be visible.

The short descriptions above mentioned don't fully represent the characteristics of each selection and must therefore be understood as indicative and not binding. A more complete and detailed description of the various grades is available on www.listonegiordano.com.

Prices are in €/m

The wood veneer of the skirting board may feature different grain and hue from the related wood flooring material.

Use Naturplus2 finished skirting board to match floors with Xplus2, Naturplus2 Matt, Mattplus and Oleonature finish.

We recommend white skirting boards to

match Bianco Assoluto.

We require 40% advance payment in order to start production.

All products in the Atelier range are compatible with heating and cooling underfloor systems provided they are installed with the glue down method and the instructions on operating temperature and humidity are strictly complied with.

During product selection we recommend reading the "General information" on page 6 and view the requirements relating to installation, use and maintenance that are available on www.listonegiordano.com

Product features and specifications may change with respect to the information in this document. For up-to-date information please refer to the documentation available on www.listonegiordano.com

⁽¹⁾ Versions of these products feature an uneven top layer after the surface processing and the thickness may be reduced in some areas compared to the one above mentioned.

⁽²⁾ Average indicative figures (in the case of weight it refers to the product including packaging)

TECHNICAL SPECIFICATIONS

FINISHES

INVISIBLE TOUCH

CRYSTALCARE

Water-based, air-dried finish. It protects wood whilst preserving the natural appearance and touch of an untreated surface. This finish features the anti-bacterial Crystalcare technology.

OLEONATURE

CRYSTALCARE

Natural oil-based, air-dried finish. Thanks to a special protective treatment applied as last coat, it features high protection and convenient maintenance. This finish features the anti-bacterial Crystalcare technology.

SURFACE PROCESSING

Filigrana

The brushing treatment of the surface enhances the wood grain pattern.

Traccia

Hand crafted surface that features the typical marks of hand planing.

Filo di Lama

Rough sawn surface effect.

Mareggiata

Handcrafted surface highlighting knots and the authentic features of the wood, to give the appearance of material exposed to weathering.

Incisione

The surface is decorated with a light bas-relief engraving.

Atelier wood flooring collections feature uneven shape and appearance typical of a hand-made product. Visible differences between planks or within the same plank (i.e. uneven and/or rough surface, difference in hues) are not to be considered defects but rather represent the very essence of the product. Wood is a natural and variegated material.

The pictures and brief descriptions in this document cannot fully represent the appearance of each product and must therefore be understood as indicative and not contractually binding. A more complete and detailed description of the various grades is available on www.listonegiordano.com.

NOTES

The products for regular installation are supplied in the same **length or mixed lengths**, subject to availability. The supply may include up to 10% of the surface of shorter material than specified.

The products feature naturally uneven hue, and marked and widespread presence of filled or open fissures, as well as encased,

tight or only partially filled knots. A detailed description of the grade is available on the designated section of www.listonegiordano.com

We require 40% advance payment in order to start production.

⁽¹⁾ The **minimum order quantity** is 25 m².

Smaller quantities are to be evaluated upon request. If accepted 300 € will be charged as setup **fixed costs**.

⁽²⁾ This product is available in the Fibratrix grade (see definition on page 12).

NOTES

The products are supplied in the same **length or mixed lengths**, subject to availability. The supply may include up to 10% of the surface of shorter material than specified.

In these products, the initial 3.5 mm top layer becomes uneven after the processing and it may be reduced up to 1 mm in some areas.

The products, except the Fibramix versions, feature naturally uneven hue, and marked and widespread presence of filled or open

fissures, as well as sound, filled or partially filled knots. A detailed description of the grade is available on the designated section of www.listonegiordano.com

The handcrafted nature of the processes and treatments performed on these products means that the end result may differ from batch to batch, both in terms of surface and hue. In the case of matching several lengths the material supplied is likely to feature uneven hues.

The cloths used for cleaning may get caught in the roughness and minor splintering on the surface. The presence of said roughness and tiny splintering is a feature to be taken into account if the flooring is for barefoot use.

We require 40% advance payment in order to start production.

NOTES

Undici is a wood floor collection combining – in proportions to be entirely decided according to the design – finely engraved boards (Decoro) with only slightly brushed boards retaining the natural surface of wood (Fondo). Each package of Decoro contains boards randomly selected among the ten different patterns characterising the collection's design.

Both Decoro and Fondo are produced in the Unica grade (see definition on page 12).

We require 40% advance payment in order to start production.

NOTES

The items are milled on four sides with groove profiles.They interlock by means of solid wood splines supplied with the material.

With regard to Unica grade please check description on page 12.

Bespoke panels may be produced on request, as an alternative to the models we offer.

For any information about feasibility, costs and delivery times please contact our sales assistants.

Due to perimeter cuts a 5% to 10% wastage is normally to be accounted for, though it may markedly vary according to the geometry of the surface to be fitted. Please do not hesitate to contact our technical department

for assistance on assessing the correct product quantity required.

The **minimum order quantity** is 25 m². Smaller quantities are to be evaluated upon request. If accepted 300 € will be charged as setup **fixed costs**.

We require 40% advance payment in

order to start production.

When placing the order, please specify the characteristics of the corresponding wood floor.

These products are manufactured upon request. The delivery time is aprox 30 days from order's confirmation.
For products with dimensions, shapes and colours other than standard, prices and

delivery terms will be confirmed from time to time.

We require 40% advance payment in order to start production.

The front of "profile A" stair nosings has no surface processing.

The standard elements of stairnosings are not designed to be fitted side by side. If you require this kind of installation please check feasibility, costs and timing with your sale assistant.

These products are an handcrafted product so tolerances are typical of an artisan process.

Stairnosings and reducers have to be installed only glued down, regardless of the type of installation of corresponding wood floor.

The skirting boards do not feature any surface treatments, except for the Erice Oak version 60x16 mm.

The wood veneer of the skirting board may feature different grain and hue from the related wood flooring material.

It is recommended to use white skirting

boards to match Undici and Heritage Monteriggioni and Montesiepi floors.

⁽¹⁾ Supplied with sawn cut effect.

outdoor

LISTONE GIORDANO MARINE

Listone Giordano Marine is a real double glued down hardwood floor suitable for outdoor application. It integrates a number of patented technologies which stem from Listone Giordano's research and experience in the field of two-layer wood flooring with birch support.

It consists of a Teak top layer and a crossed-fibre birch plywood support, with a total thickness of 12.5 mm. Wood layers are glued together using very high-performance adhesives exceeding JAS type II test requirements (immersion for 2 hours in water at 70° C and subsequent 3-hour exposure to forced ventilation at 60° C in a lab oven).

The board surface features longitudinal grooves that not only enhance the stability of the product, but also ensure excellent non-slip performance in case of

wet flooring. With Listone Giordano Marine you can install an outdoor hardwood floor having the same aesthetic features and underfoot feel as a Listone Giordano indoor floor.

Listone Giordano Marine can be also installed indoors, thus allowing you to create seamless surfaces between the inside and outside of a house.

As this solution, unlike raised decking, has no gap below the floor and no interspace between wood boards, cleaning and maintenance operations are extremely easy.

TOP LAYER: 3.5 mm
SUPPORT THICKNESS: 9 mm
TOTAL THICKNESS: 12.5 mm
SUPPORT: BIRCH PLYWOOD
WEIGHT: 9,4 kg/m²
INSTALLATION: GLUED-DOWN

FINISHES

OUTNATURE

OUTNATURE, the innovative outdoor finishing system with a natural oil base, deeply conditions wood, creating a protective barrier against ageing and cracking. Unlike conventional oils, OUTNATURE does not require sanding during maintenance. With its special formula, OUTNATURE prevents the typical risks of cracking following application of water-based products.

UNFINISHED WOOD

Pre-polished surface ready to be finished on site with specific finishes for outdoor wood installations.

The product is designed for installation on concrete subfloor (screed) detached from the ground (installation on ground subfloor is not allowed). The information sheet for correct installation and use of Listone Giordano Marine “DK-03 Listone Giordano Marine” can be downloaded from our website www.listonegiordano.com

During product selection we recommend reading the “General information” on page 96 and view the requirements relating to installation, use and maintenance that are available on www.listonegiordano.com

Product features and specifications may change with respect to the information in this document. For updated information please refer to the documentation available on the website www.listonegiordano.com

| Rope made of foam material diameter 10 mm | spare | 1,0 m/m | 0,81 €/m |

The products are supplied in the same **length or mixed lengths**, subject to availability. The supply may include up to 10% of the surface of shorter material than specified.

This product does not feature standard finishing elements. However, customised items may be produced, quotation upon request.

⁽¹⁾ The Outnature finishing system entails application of the first protective layers in the

production stage, while an additional layer also having slip-proof properties is applied immediately after laying. The products required for application of the last layer are supplied with the floor and are included in the price shown.

⁽²⁾ Yield compared to the perimeter linear metres of the floored surface. The actual yield depends on the free space between the floor and the walls around the floored surface. The yield set out herein

refers to an 8-10 mm space.

⁽³⁾ Adhesives and sealants for application of the floor to the subfloor are an integral part of the system and must be supplied with the floor.

LISTONE GIORDANO DECKING

Listone Giordano outdoor decking is a raised structure consisting of wooden planks fixed to an aluminium substructure by means of an original and patented mechanical system.

The JuAn® fixing system consists of clips made of a special synthetic material resistant to temperature changes and weathering. It makes it possible to

halve the laying times and to perform the various operations without using screwdrivers, nails and screws.

This system is also suitable for wall application.

PROFILE AND MOUNTING SYSTEM

PROFILE

The exclusive rounded profile is the best solution in terms of comfort, dimensional stability and water drainage from the surface of the floor. The lengthwise notches support quick attachment to the substructure and provide great stability against warping.

CLIPS

The JuAn Clips® in high resistance polyoxymethylene for outdoor use, perfectly anchored to the aluminium substructure, assure perfect tightness of the boards to the substructure.

The innovative, fully removable system allows the boards to be removed and replaced for easier installation, inspection and routine maintenance operations.

METAL SUBSTRUCTURE KIT

KIT 40

Fixed height aluminium structure for installation of floors on solid surfaces and waterproofing sheet. It promotes drainage of rainwater parallel to the substructure only.

KIT 50

Fixed height aluminium structure with rubber shims for the installation of floors on solid surfaces. It allows rainwater to drain in all directions.

KIT 60

Fixed height aluminium structure with rubber shims for the installation of floors on solid surfaces. It allows rainwater to drain in all directions.

KIT 118-228

Aluminium structure with adjustable height supports for installation of floors in public or residential premises. It allows rainwater to drain in all directions.

SURFACES

SMOOTH

The smooth surface enhances the natural appearance of wood.

BRUSHED

Brushing enhances the surface of heat-treated wooden floors, highlighting the beauty of the fibres and making it remarkably non-slip.

FINISHES

OUTNATURE

OUTNATURE, the innovative outdoor finishing system with a natural oil base, deeply conditions wood, creating a protective barrier against ageing and cracking. This industrially applied finish protects the whole surface of the boards, including the edges, the ends and downward face. Unlike conventional oils, OUTNATURE does not require sanding during maintenance. Thanks to its special formula, OUTNATURE prevents the risks of cracking, a typical effect of water based products during the summer months and on wood species particularly resistant to moisture absorption such as heat treated ash wood.

UNFINISHED WOOD

Pre-planed surface to be finished on site with specific outdoor wood finishing products.

These products must be applied on raised structures above ground level, in compliance with construction regulations in order to preserve the floor over time. Installation instructions are available in the designated section on www.listonegiordano.com.

During product selection we recommend reading the "General information" on page 96.

Product features and specifications may change with respect to the information in this document. For updated information please refer to the documentation available on the website www.listonegiordano.com.

Prices are in €/m²

The products are supplied in mixed lengths subject to availability. Requests for one or more predominant lengths are considered special orders and consequently, if accepted, entail a price increase. Please contact the sales assistant to check availability.

The prices per square metre, as well as quantities per square metre of the substructure and accessories, refer to the gross area covered by the decking, therefore including interspace between boards.

Before placing the order please always check availability and delivery time with the sales assistants.

⁽¹⁾ Prices per square metre are indicative and were calculated based on an average substructure centre distance of 400 mm. Should one decide to use a shorter centre distance, or for installation sites having complex geometry, the required amount of substructure components might be higher. The substructure components will in any

case be invoiced based on the amount actually ordered and delivered and on the unit prices shown on pages 92-93. Please do not hesitate to contact the sales assistants to determine the number of units needed for your specific installation project.

⁽²⁾ The Outnature finishing system entails application of the first protective layers in the production stage, while an additional layer also having slip-proof properties is applied immediately after laying. The products

required for application of the last layer are supplied with the floor and are included in the price shown.

The products are supplied in mixed lengths subject to availability. Requests for one or more predominant lengths are considered special orders and consequently, if accepted, entail a price increase. Please contact the sales assistant to check availability.

The prices per square metre, as well as quantities per square metre of the substructure and accessories, refer to the gross area covered by the decking, therefore

including interspace between boards.

Before placing the order please always check availability and delivery time with the sales assistants.

⁽¹⁾ Prices per square metre are indicative and were calculated based on an average substructure centre distance of 400 mm. Should one decide to use a shorter centre distance, or for installation sites having complex geometry, the required amount of

substructure components might be higher.

The substructure components will in any case be invoiced based on the amount actually ordered and delivered and on the unit prices shown on pages 84-85. Please do not hesitate to contact the sales assistants to determine the number of units needed for your specific installation project.

⁽²⁾ The Outnature finishing system entails application of the first protective layers in

the production stage, while an additional layer also having slip-proof properties is applied immediately after laying. The products required for application of the last layer are supplied with the floor and are included in the price shown.

TEAK

Origin: Asia (Burma)
 Lengths: 1200/1500/
 1800/2100/2400 mm
 Centre distance between boards: 140 mm
 Space between boards: 5 mm
 Top layer: 5 mm
 Total thickness: 23 mm
 Support: birch plywood
 Weight: 14 kg/m² approx.
 Surface: smooth
 Substructure centre distance: 300/400 mm

⁽¹⁾ Average yield referring to one coat application. It is recommended to apply two coats of the finishing treatment on site.

WOOD FOR OUTDOOR USE: LIVING MATERIAL

Wood is a "living" material subject by its very nature to changes due to environmental factors such as air temperature and moisture, sunlight and weathering.

HARDNESS

The individual hardness features of all wood species processed to manufacture the parquet products herein make them suitable for hardwood flooring. However surface dents or marks may occur in even the hardest of woods, if the hardwood floor undergoes impacts, is hit by falling objects, or is loaded with highly concentrated weight (stiletto heels, ladders, etc.).

LOOSE KNOTS AND WORMHOLES

All wood floor surfaces may feature knots and small holes (wormholes) either open or filled.

COLOUR

Long exposure to sunlight and weathering leads to a progressive colour change and regardless of the initial colour, wood will tend to turn grey. This is a natural and inevitable phenomenon on wood for outdoor use. The more intense the UV exposure, the more quickly will the change occur, but the colour alteration only affects the surface of the wood and has no effect on its mechanical and structural features.

WEATHER CONDITIONS

Wood is a living material and as such, it reacts and adapts to changes in temperature and moisture, which may lead to small fissures forming over time. This phenomenon may be more significant if the floor is exposed to extreme air dryness or moisture or to sudden weather changes.

SAMPLES

Wood is a natural material, uneven and variegated by its very nature: every item is unique and unrepeatable. Therefore samples consisting of few boards can only provide a general idea of what a parquet will look like and cannot fully show the different hues, grains and unique features.

As mentioned above, wood colour tends to change over time, due to exposure to light and air. That is why a recently installed wood floor typically features a different appearance and hue compared to a sample panel of the same product which has been exposed to natural light for some time.

MAINTENANCE

Maintenance of a wood floor is quite straightforward, yet it is essential for perfect preservation over time. That is why we strongly recommend to follow the instructions available for downloading from www.listonegiordano.com.
